Baseline Spend Delivers 3x the Revenue Share of Promotional Spend

| Week Type | % of Spend | % of Revenue |
|-----------|------------|--------------|
| Baseline  | 0.80       | 0.93         |
| Promotion | 0.20       | 0.07         |
| Total     | 1.00       | 1.00         |

No Delayed Payoff — Post-Promo Weeks Don't Recover

| Lag Category      | % of Spend by Lag | % of Revenue by Lag |
|-------------------|-------------------|---------------------|
| Promotion Week    | 0.20              | 0.07                |
| Post-Promo (+1wk) | 0.16              | 0.13                |
| Post-Promo (+2wk) | 0.13              | 0.05                |
| Baseline          | 0.51              | 0.75                |
| Total             | 1.00              | 1.00                |

TikTok Spend Is Most Concentrated in Promo Weeks

| Week Type | TikTok Spend | Snapchat Spend | Instagram Spend | Google Spend | Facebook Spend |
|-----------|--------------|----------------|-----------------|--------------|----------------|
| Baseline  | 73.27%       | 79.90%         | 91.40%          | 81.52%       | 78.29%         |
| Promotion | 26.73%       | 20.10%         | 8.60%           | 18.48%       | 21.71%         |
| Total     | 100.00%      | 100.00%        | 100.00%         | 100.00%      | 100.00%        |

**Ruled out:** Average price is flat between Baseline and Promotion weeks (\$99.70 vs. \$100.95) — the revenue gap isn't a discounting effect. Email and SMS volume are also flat (~121K emails, ~24K SMS either way) — promotions in this dataset are a paid-social-specific push, not a full-funnel campaign.
